

.....the Frontispiece, or annexed Engraving of a singular Fossil Tooth, of some extinct monstrous unknown animal, which is opalized;---found in Norfolk.

Strata with organized fossils.

..... The Crag being, in some parts of its course, composed of shells and sand, in some places of shells and clay, and in others of shells and corals, united in a soft stoney rock, which about Orford is used in building.

Crag.

Crag is a local term for shells mixed with sand, overlaying the Chalk, in the counties of Norfolk and Suffolk.

It is best known and most in use for agricultural purposes in the latter county.

It extends from Tattingstone Park south of Ipswich, through the East Sands or Flock district, to Henham Park west of Sothwold.

Re-appears South and North of the Yare, below Norwich, at Bramerton and Thorpe, and has been found at Marsham in the vale of Aylesham, in its course to the sea side west of Cromer.

Organized Fossils

Fig.

- 1 Murex contrarius, Reversed Whelk. - - Thorpe Common, Harwich. Alderton, Suffolk. Holywell near Ipswich. Tattingstone Park.
- 2 Murex striatus, Striated Whelk. - - - Bramerton, Holywell, Alderton, Aldborough.
